

Gliwice, September 15, 2025

On May 13–14, 2026, the CyberTek Tech Festival will once again be held at the Silesian Museum in Katowice.

CyberTek arose from the need to continuously improve technical competences, share knowledge and experience, and improve cooperation in the field of OT cybersecurity between organizations. It is also one of the most interesting events of its kind in Poland, attracting hundreds of outstanding cybersecurity specialists, practitioners, and academics from around the world to Katowice for five years.

The event consists of two main thematic areas:

- ICS cybersecurity
- Industrial networks & technology

The conference will feature substantive lectures, debates with cybersecurity and industrial networking specialists, live discussions, allowing for the involvement and active participation of participants, and presentations by special guests from Poland and abroad.

The event will be complemented by practical on-site workshop sessions for those interested in applying their acquired knowledge in practice, as well as ThreatGen gameplay and a technical "playground" with numerous solutions available for testing.
